

Q1. Define Management according to a Scientific Approach.

Management according to the scientific approach means **using facts, study, and proper methods to do work in the best and most efficient way**. It was introduced by **F.W. Taylor**. The main aim is to **increase productivity, save time, and reduce waste** by finding the best way to perform a job.

Key Points:

- Uses scientific methods instead of guesswork.
- Focuses on doing work efficiently.
- Increases productivity.
- Reduces waste of time and resources.
- Developed by F.W. Taylor.

Short Conclusion:

The scientific approach treats management as a systematic way of achieving organizational goals with maximum efficiency.

Q2. What are the key characteristics of the pre-scientific era in management thought?

The **pre-scientific era** was the period before scientific management was developed. During this time, work was done mainly based on **experience, tradition, and personal judgment** rather than scientific methods. There were no standard rules for managing workers or improving efficiency.

Key Points:

- Management was based on experience and common sense.
- No scientific methods were used.
- Work methods differed from person to person.
- Decisions were based on personal judgment.
- Low efficiency and productivity.
- No proper training or standard procedures.

Short Conclusion:

The pre-scientific era relied on traditional practices and lacked a systematic approach to management.

Q3. What was F.W. Taylor’s main contribution to management?

F.W. Taylor's main contribution was the development of **Scientific Management**. He suggested that work should be studied scientifically to find the **best way of doing a job**. His ideas helped increase **efficiency, productivity, and worker performance**.

Key Points:

- Known as the **Father of Scientific Management**.
- Introduced scientific methods in management.
- Focused on finding the best way to do work.
- Increased productivity and efficiency.
- Emphasized proper training and work standards.

Short Conclusion:

F.W. Taylor made management more systematic and efficient through Scientific Management.

Q4. What key insight came from Elton Mayo’s Hawthorne Experiments?

Elton Mayo's Hawthorne Experiments showed that **workers perform better when they receive attention and feel valued**. The experiments proved that **social and psychological factors** are important in improving productivity, not just money or working conditions.

Key Points:

- Workers perform better when they are given attention.
- Human relations are important in management.
- Social and psychological factors affect productivity.
- Good communication and teamwork improve performance.
- Led to the Human Relations approach in management.

Short Conclusion:

The Hawthorne Experiments showed that people work better when they feel important and are treated well.

Q5. Is management a science or an art?

Management is considered **both a science and an art**. It is a science because it uses **rules, principles, and systematic methods**. It is an art because managers need **skill, experience, and creativity** to handle people and solve problems.

Key Points:

- Management is both a science and an art.
- Science: Uses principles and methods.
- Art: Requires skill and practical experience.
- Helps in making decisions and solving problems.
- Effective management needs both knowledge and skill.

Short Conclusion:

Management is a combination of science and art, as it requires both knowledge and practical skills.

Q6. What is the role of social responsibility in management?

Social responsibility means that a business should not only focus on profit but also work for the **welfare of society and the environment**. Management should make decisions that benefit customers, employees, and the community.

Key Points:

- Helps in the welfare of society.
- Protects the environment.
- Ensures ethical business practices.
- Improves the company's reputation.
- Builds trust among customers and employees.

Short Conclusion:

Social responsibility helps a business grow while contributing positively to society and the environment.

Q7. Why does the management process start with planning?

The management process starts with **planning** because it decides **what is to be done, how it will be done, when it will be done, and who will do it**. Planning provides direction and helps managers achieve organizational goals efficiently.

Key Points:

- Planning is the first function of management.
- It sets goals and objectives.
- Provides direction for future actions.
- Helps in proper use of resources.
- Reduces uncertainty and confusion.

Short Conclusion:

Management starts with planning because it lays the foundation for all other management activities.

Q8. What are planning premises?

Planning premises are the assumptions or conditions on which a plan is based. They help managers make plans by considering future situations and expected conditions.

Key Points:

- They are assumptions about the future.
- Help in making effective plans.
- Can be internal or external factors.
- Reduce uncertainty in planning.
- Provide a basis for decision-making.

Short Conclusion:

Planning premises are the expected conditions and assumptions that guide the planning process.

Q9. Difference Between Strategic Planning and Operational Planning

Strategic Planning	Operational Planning
Focuses on long-term goals.	Focuses on short-term activities.
Prepared by top management.	Prepared by middle and lower-level managers.
Deals with the overall direction of the organization.	Deals with day-to-day operations.
Covers the entire organization.	Covers specific departments or units.
Decides what the organization wants to achieve.	Decides how to achieve the goals.

Q10. What is a common barrier to effective planning?

A common barrier to effective planning is **uncertainty about the future**. Changes in the market, technology, economy, or customer needs can make planning difficult and may affect the success of plans.

Key Points:

- Uncertainty about future conditions.
- Lack of accurate information.
- Rapid changes in the business environment.
- Limited resources and time.
- Poor communication among employees.

Short Conclusion:

Uncertainty is one of the biggest barriers to effective planning because the future cannot be predicted with complete accuracy.

Q11. What is McKinsey’s 7-S Framework?

McKinsey's 7-S Framework is a management model used to analyze and improve an organization. It states that seven elements must work together for an organization to be successful.

The 7 S's are:

1. **Strategy** – Plan to achieve goals.
2. **Structure** – Organizational setup.
3. **Systems** – Procedures and processes.
4. **Shared Values** – Common beliefs and culture.
5. **Skills** – Abilities of employees.
6. **Style** – Leadership and management approach.
7. **Staff** – Employees of the organization.

Q12. What is the relationship between planning and controlling?

Planning and controlling are closely related functions of management. **Planning sets the goals and standards, while controlling checks whether those goals are being achieved.** If there is any difference between planned and actual performance, controlling helps in taking corrective action.

Key Points:

- Planning decides objectives and targets.
- Controlling measures actual performance.
- Controlling is based on planning.
- Both help achieve organizational goals.
- They complement each other.

Short Conclusion:

Planning and controlling go hand in hand. Planning shows the way, and controlling ensures that the organization stays on the right path.

Q13. What is the nature of decision-making in management?

Decision-making is the process of **choosing the best option from different alternatives** to solve a problem or achieve a goal. It is an important part of management because managers make decisions at every level of the organization.

Key Points:

- It is a continuous process.
- Involves choosing the best alternative.
- Helps solve problems and achieve goals.
- Based on information and analysis.
- Required at all levels of management.

Short Conclusion:

Decision-making is a vital management function that helps managers select the best course of action for the organization.

Q14. How does decision-making under uncertainty differ from decision-making under certainty?

Decision-making under certainty occurs when the manager has complete information and knows the outcome of each option. **Decision-making under uncertainty** occurs when the future is unknown and outcomes cannot be predicted accurately.

Under Certainty	Under Uncertainty
Complete information is available.	Information is limited or unavailable.
Outcomes are known.	Outcomes are unknown.
Risk is very low.	Risk is high.
Decisions are easier to make.	Decisions are more difficult to make.

Short Conclusion:

Under certainty, managers know the results of their decisions, while under uncertainty they must make decisions without knowing exactly what will happen.

Q15. What is the purpose of a decision tree in decision-making?

A **decision tree** is a diagram that shows different choices and their possible outcomes. It helps managers compare alternatives and choose the best option.

Key Points:

- Shows different decision alternatives.
- Displays possible outcomes of each choice.
- Helps analyze risks and benefits.
- Makes decision-making easier.
- Supports better and logical decisions.

Short Conclusion:

A decision tree helps managers evaluate different options and select the most suitable decision.

Q16. What is the role of brainstorming in group-aided decision making?

Brainstorming is a technique in which group members freely share ideas to solve a problem or make a decision. It encourages creativity and helps generate many possible solutions.

Key Points:

- Encourages free flow of ideas.
- Involves participation of all group members.
- Generates many alternative solutions.
- Improves creativity and innovation.
- Helps in better decision-making.

Short Conclusion:

Brainstorming helps groups generate creative ideas and choose the best solution for a problem.

Q17. What is the concept of delegation in organising?

Delegation is the process of assigning work and authority by a manager to a subordinate so that the task can be completed effectively. The manager gives responsibility but remains accountable for the final result.

Key Points:

- Assignment of work to subordinates.
- Transfer of authority to perform tasks.
- Improves efficiency and productivity.
- Reduces the workload of managers.
- Helps in employee development and training.

Short Conclusion:

Delegation helps managers share work and authority, making the organization more efficient and effective.

Q18. What is the difference between centralisation and decentralisation in organising?

Centralisation	Decentralisation
Decision-making power is concentrated at the top level.	Decision-making power is shared with lower levels.
Top managers make most decisions.	Lower-level managers can make decisions.
Less freedom for employees.	More freedom and participation for employees.
Decisions may take more time.	Decisions are usually faster.
Greater control by top management.	Greater flexibility in operations.

Q19. Why does resistance to organisational change occur?

Resistance to organisational change occurs because employees may **fear the unknown**, lose confidence, or worry that the change will affect their job, position, or routine work.

Key Points:

- Fear of the unknown.
- Lack of understanding of the change.
- Fear of losing job or authority.
- Comfort with existing methods.
- Lack of trust in management.

Short Conclusion:

Employees resist change when they feel insecure or believe the change may negatively affect them.

Q20. What is the purpose of manpower planning in staffing?

Manpower planning is the process of determining the number and type of employees needed by an organization. It ensures that the right people are available at the right time and in the right jobs.

Key Points:

- Ensures availability of qualified employees.
- Helps in recruitment and selection.
- Prevents shortage or surplus of staff.
- Supports organizational goals.
- Improves efficient use of human resources.

Short Conclusion:

Manpower planning helps an organization have the right number of employees with the right skills at the right time.

Q21. How does motivation contribute to achieving organisational objectives?

Motivation encourages employees to work hard and perform better. Motivated employees are more productive, committed, and focused on achieving the goals of the organization.

Key Points:

- Increases employee performance.
- Improves productivity.
- Encourages commitment to work.
- Enhances job satisfaction.
- Helps achieve organizational goals.

Short Conclusion:

Motivation helps employees give their best efforts, which leads to the achievement of organizational objectives.

Q22. What is the role of leadership in an organisation?

Leadership is the ability to guide, influence, and motivate employees to achieve organizational goals. A good leader helps employees work together and perform their best.

Key Points:

- Guides and directs employees.
- Motivates employees to work better.
- Improves teamwork and coordination.
- Helps achieve organizational goals.
- Builds confidence and trust among employees.

Short Conclusion:

Leadership plays an important role in guiding and motivating employees to achieve organizational success.

Q23. How does electronic media communication benefit an organisation?

Electronic media communication helps organizations share information quickly and efficiently through emails, video conferencing, messaging apps, and the internet.

Key Points:

- Enables fast communication.
- Saves time and cost.
- Improves coordination among employees.
- Helps in quick decision-making.
- Supports communication across different locations.

Short Conclusion:

Electronic media communication improves the speed and effectiveness of communication, helping organizations work more efficiently.

Q24. What is the primary concept of Computer-Integrated Manufacturing (CIM)?

Computer-Integrated Manufacturing (CIM) is a manufacturing system where computers are used to control and coordinate all production activities, from design to manufacturing.

Key Points:

- Integrates all manufacturing processes using computers.
- Connects design, production, and quality control.
- Improves efficiency and productivity.
- Reduces human errors.
- Enables faster production.

Short Conclusion:

CIM uses computers to integrate and manage the entire manufacturing process efficiently.

Q25. What is a key benefit of Computer Integrated Manufacturing (CIM) in modern manufacturing?

A key benefit of Computer Integrated Manufacturing (CIM) is that it increases productivity and efficiency by integrating all manufacturing activities through computers. It helps produce goods faster, with better quality and fewer errors.

Key Points:

- Increases productivity.
- Improves product quality.
- Reduces human errors.
- Saves time and cost.
- Ensures smooth production processes.

Short Conclusion:

CIM improves manufacturing efficiency by automating and coordinating production activities through computers.
